

AusAlert™

Helps keep you informed

AusAlert is the Australian Government's new warning system. It sends emergency messages to compatible mobile devices during disasters such as bushfires, severe weather and public health emergencies.

It's a fast, reliable, safe and secure way to help you know what to do in an emergency.

During a disaster, you may receive an AusAlert on your:

- mobile phone
- tablet device
- smart watch.

An AusAlert may:

- **make your device vibrate**
- **play a loud siren-like sound for about 10 seconds.**

If you receive an AusAlert:

- stay calm
- read the message carefully
- ask someone you trust for help, if you need to
- follow the instructions in the alert.

AusAlert help

If you have questions about AusAlert or updating your device, ask a carer, family member or someone you trust for help.
